

Summary of Research Findings

Impact of IDEAS Maker Club on Socializing

- **ALL students (both autistic and non-autistic) showed increased rates of social responsiveness to peers throughout their time participating in Maker Club.**
- Teachers report that their autistic students were more socially engaged in Maker Club compared to in the traditional classroom.
- Sharing interests with peers while participating in a flexible and creative social environment encouraged these exciting social findings.
 - Citation: Chen, Y. L., Martin, W., Vidiksis, R., & Patten, K. (2021). "A different environment for success": A mixed-methods exploration of social participation outcomes among adolescents on the autism spectrum in an inclusive, interest-based school club. *International Journal of Developmental Disabilities*, 1–10.

Impact of IDEAS Maker Club on STEM Career Interest

- **All Maker Club students increased their interest in pursuing a STEM-related career.**
- Autistic students entered Maker Club with a heightened interest in STEM careers and higher science appreciation scores compared to non-autistic peers.
 - Citation: Martin, W. B., Yu, J., Wei, X., Vidiksis, R., Patten, K. K., & Riccio, A. (2020, June). Promoting science, technology, and engineering self-efficacy and knowledge for all with an autism inclusion maker program. In *Frontiers in Education* (Vol. 5, p. 75). Frontiers Media SA.

Impact of IDEAS Maker Club on Understanding the Engineering Design Process

- **Students who participated in Maker Club showed improved technology and engineering self-efficacy, science appreciation, and understanding of the EDP compared to students who did not enroll in Maker Club.**
- Citation: Martin, W. B., Yu, J., Wei, X., Vidiksis, R., Patten, K. K., & Riccio, A. (2020, June). Promoting science, technology, and engineering self-efficacy and knowledge for all with an autism inclusion maker program. In *Frontiers in Education* (Vol. 5, p. 75). Frontiers Media SA.

Impact of IDEAS Maker Club on Executive Functioning

- > **Maker Club students developed perseverance in the face of challenges, flexibly and resourcefully solved design problems, and accepted failure or mistakes as a normal part of the engineering process.**
 - Citation: Murthi, K., Chen, Y. L., Patten, K., Martin, W., Vidiksis, R., & Riccio, A. (2022). "What do we do after we fail? We try again": Autistic students' experiences of project failures in an interest-based afterschool maker program. INSAR (International Society for Autism Research) Annual Meeting 2022.

"A different environment for success": A mixed-methods exploration of social participation outcomes among adolescents on the autism spectrum in an inclusive, interest-based school club. <i>International Journal of Developmental Disabilities</i> , 1–10. https://doi.org/10.1080/20473869.2021.2001729	Benefits of interest-driven clubs, group activities, and flexible social and project-based learning environments	Both students on the spectrum and non-autistic peers without any group differences demonstrated increased social response rates and social reciprocity over time. Teachers reported that students on the spectrum engaged more socially than in general classrooms and attributed the positive outcomes to activities encouraging shared interests and the flexible social environment.
